

National Manufacturing Co., Inc. is a leading supplier of deep and shallow draw metal forming services supplying a broad variety of critical service components to sophisticated customers worldwide. Continued growth has created more opportunities for talented individuals to join our team.

National Manufacturing Co., Inc. is currently seeking a Process Engineer with the following experiences.

Process/Automation Engineer is responsible for designing and building fully functional process control systems on time and within budget that will serve to improve metal forming processes. Engineer will be responsible for solving current manufacturing process problems, and implementing creative, efficient solutions. He/She will be capable of managing multiple projects concurrently, while documenting and communicating formal project plans. Engineer will be able to fabricate, test, and install newly developed systems and train appropriate members. Also he/she will be able to provide technical support to manufacturing and tooling design members to help proactively improve process efficiency starting at the beginning of new product development. Engineer should be familiar with lean manufacturing and work cell design and functionality. Proven experience in automation of existing processes is a must.

Additional Qualifications

- Bachelors degree in engineering
- 5 to 7 years experience in the field of manufacturing equipment design
- Extensive experience with PLC programming and feedback control systems
- Experience with Microsoft programs including Excel, PowerPoint, Project, and Outlook
- Medium to High level in AutoCAD proficiency
- Ability to use Switches, relays, industrial sensors, shakers, hydraulics, pneumatics, and other general manufacturing equipment.
- Fundamental knowledge of mechanical, electrical, plumbing, and HVAC systems
- Ability to work well on a team, as well as be self reliant and independent when necessary

Qualified candidates should forward their resume to via e-mail jmartinez@natlmfg.com or mail
